

5_20T_5	fish_data20_5min, Fish_data20_10min, Fish_data20_20min, Fish_data20_40min	Effects of increasing exposure time of high density	Fig. 2e
5_20_5_for2hours	Fish_data	Measuring the stability of induced behavioral modulation	Fig. 2f
5_20_0T_5	Fish_data0_0min, Fish_data0_10min, Fish_data0_20min, Fish_data0_50min	Reversing the effects of high density by introducing increasing time of 0 neighbors	Fig. 2g
Motion energy 5_rings20_5, 5_stationary20_5, 5_stationary_growing_5	Fish_data	Isolating specific motion statistics that induce modulation	Fig. 3a
Motion energy single dot moving, single dot moving closer, single dot growing	Fish_data, Side	Isolating specific motion statistics that induce modulation by using a single dot stimulus	Fig. 3b-c
Additional data			
5_20_5_0_5	Fish_data	Inducing and reversing behavioral modulations	Fig. S2g-h
5_5Big_5	Fish_data	Effects of same density but larger dot size	Fig. S3a
5_5speedx1_5, 5_5speedx2_5, 5_5speedx4_5	Fish_data	Effects of same density but increased speed of dots	Fig. S3b
5_20_5, 5_40_5	Fish_data	Effects higher density levels	Fig. S3d
